

Grand Designs – Norfolk

Setting the scene

WORKING WITH
wisegreenenergy
a natural choice

We have worked directly with two Grand Designs feature homes, showcasing both our SAHP and Retrofit product range in innovative scenarios.

After the second installation, one of our sales and distribution partners, Wise Green Energy (WGE) explained that they were working on an interesting project local to them that saw the owner replacing unreliable, seasonal solar thermal panels at the time with the maintenance free SAHP retrofit.

The homeowner contacted WGE as they were conscious of using renewable technology around the house and this ideology can be seen around the home which featured in the Grand Designs magazine.

The new build Passiv standard home utilises an MVHR system and air source heat pump for space heating. The SAHP retrofit has been installed to the existing relatively new hot water cylinder to provide a maintenance free, hot water heat pump designed to heat water to 55°C – 60°C in all weather, all year around.
