

## Holiday Park - Lake District

# Setting the scene

WILSON HOUSE HOLIDAY PARK

SAHP are showing the diversity of their products by working alongside Holiday Parks and static Homes in the UK, how many Caravans or Static homes do you see on sites across the country using Gas bottles, combi boiler or just all immersion heaters?

SAHP can provide a renewable maintenance free solution for the Holiday Park industry for a third of the costs shown here in the Lake district. In this picture it shows we don't just install to individual cabins or static homes

but communal shower blocks, with high hot water demands at different times of the day the SAHP will always be available to re heat at any time of the year or day.

4 x SAHP Retro fit units were installed on this block in 2019 which has led to many more holiday parks, Pods, and communal areas to cut down on running costs as well as fossil fuels.
