

## Hotel

# Setting the scene

AS an efficient way of heating water our solar assisted heat pumps are being adopted more within commercial properties, such as boutique hotel chain Mode Hotels in Blackpool. The chain worked with one of our registered installation partners to upgrade their hot water system.

The partners decommissioned the previous, ageing solution with a set of energy-efficient SAHP 200s in parallel. Following the successful trial of this first site the chain now utilises our SAHP 200s in a number of their hotel sites across the UK.
