

ZEDpod – NHS

Setting the scene

**ZED
PODS**

We have worked with ZEDPods on a number of projects over the past couple of years. With 2020 bringing with it the onset of Covid-19, it was an honour to see the company specify our systems on one of their latest projects at Hinchingsbrooke Hospital.

This project, which sees the company build the units off-site at their factory and deliver them, needing only the finishing touches to complete the project.

Once again ZEDpod, whose innovative homes feature a number of technologies ensuring ultra-low energy consumption and cheaper running costs have utilised our system to not only heat the water but also generate the space heating within these compact units as well.

Once complete the eight units will offer on-site accommodation for NHS key staff.
