Setting the scene

Since achieving the MCS standard Magic Box International have been in discussion with a number of sustainable home architects and builders. Earlier this year the company started working with

The Zed Factory and at the beginning of March, the LMTB IV was installed in one of their projects entitled Zero Bills home. This partnership sees the latest version LMTB installed in a series of houses across a number of developments enabling the stand-alone generation of hot water. The Zero Bills

Homes are a series of prefabricated zero carbon buildings that are seeking to deliver Zero Utility Bill living - a new generation of smart affordable living. The Zero Bills home concept really does tie in with the ethos of the LMTB IV and something that Magic Box International is excited to be involved with.

The LMTB IV and Thermodynamic Panel are installed to view in the Zed Factory feature house at the BRE Innovation Park Watford
