

## CamProp - Barton Road

# Setting the scene

As the focus further shifts towards energy efficient, renewable ways of heating your home's water, we have seen a significant up-turn in interest in our range of SAHP products amongst new build developers.

One of these partnerships has allowed us to work on a number of projects across Cambridgeshire. This Barton Road site has seen the redevelopment of an existing building, converted into apartments. As all of our SAHP range implements

reciprocating compressors, the operating volume is kept to just 41Db. This enables the systems to be installed within the living areas without any issue.

The flexibility of our evaporator panels has enabled the team to install them along the side of the building, without impacting the traditional styling of the property.
