

## Elliscombe House - Care Home

# Setting the scene

As the uncertainty surrounding fuel costs continues to grow, a number of commercial site managers are turning to cheaper alternatives.

In this instance the management team of a beautiful care home turned to SAHP products to supply an alternative to heat the home's hot water. In this instance and after a consultation with the technical team, a series of seven SAHP 200L systems were chosen to be installed in the

home's plant room. One of our distribution partners worked with the home to create a solution that would offer the hot water needed in the care home whilst reducing future utility costs.
